

Tribal Build, Integrate, and Test System

Roscoe A. Bartlett

(bartlettra@ornl.gov)
Computational Engineering and Energy Sciences Group,
Oak Ridge National Laboratory

The Problem => Develop and Deploy Complex Software

- Multiple software repositories and distributed development teams
- Multiple compiled programming languages (C, C++, Fortran) and mixed-language programs
- Multiple development and deployment platforms (Linux, Windows, Super-Computers, etc.)
- Stringent software quality requirements

Solution Approach

=> TriBITS custom CMake build & test framework

Why CMake?

Why TriBITS?

Why CMake?

 Open-source tools maintained and used by a large community and supported by a profession software development company (Kitware).

CMake:

- Simplified build system, easier maintenance
- Improved mechanism for extending capabilities (CMake language)
- Support for all major C, C++, and Fortran compilers.
- Automatic full dependency tracking (headers, src, mod, obj, libs, exec)
- Faster configure times (e.g. > 10x faster than autotools)
- Shared libraries on all platforms and compilers
- Support for MS Windows (e.g. Visual Studio projects)
- Portable support for cross-compiling
- Good Fortran support (parallel builds with modules with src => mod => object tracking, C/Fortran interoperability, etc.)

CTest:

- Parallel running and scheduling of tests and test time-outs
- Memory testing (Valgrind)
- Line coverage testing (GCC LCOV)
- Better integration between the test system and the build system

Why TriBITS?

- Framework for large, distributed multi-repository
 CMake projects
- Reduce boiler-plate CMake code and enforce consistency across large distributed projects
- Subproject dependencies and namespacing architecture (packages)
- Automatic package dependency handling
- Additional tools for agile software development processes (e.g. Continuous Integration (CI))
- Additional functionality missing in raw CMake
- Change default CMake behavior when necessary

Raw CMake vs. TriBITS

Raw CMakeLists.txt File

Build and install library

SET(HEADERS hello_world_lib.hpp)

SET(SOURCES hello_world_lib.cpp)

ADD_LIBRARY(hello_world_lib \${SOURCES})

INSTALL(TARGETS hello_world_lib DESTINATION lib)

INSTALL(FILES \${HEADERS} DESTINATION include)

Build and install user executable

ADD_EXECUTABLE(hello_world hello_world_main.cpp)

TARGET_LINK_LIBRARIES(hello_world hello_world_lib)

INSTALL(TARGETS hello_world DESTINATION bin)

Test the executable

ADD_TEST(test \${CMAKE_CURRENT_BINARY_DIR}/hello_world)

SET_TESTS_PROPERTIES(test PROPERTIES PASS_REGULAR_EXPRESSION "Hello World")

Build and run some unit tests

ADD_EXECUTABLE(unit_tests hello_world_unit_tests.cpp)

TARGET_LINK_LIBRARIES(unit_tests hello_world_lib)

ADD_TEST(unit_test \${CMAKE_CURRENT_BINARY_DIR}/unit_tests)

SET_TESTS_PROPERTIES(unit_test_PROPERTIES PASS_REGULAR_EXPRESSION "All unit tests passed")

TriBITS Package CMakeList.txt File

```
TRIBITS_PACKAGE(HelloWorld)

TRIBITS_ADD_LIBRARY(hello_world_lib

HEADERS hello_world_lib.hpp SOURCES hello_world_lib.cpp)

TRIBITS_ADD_EXECUTABLE(hello_world NOEXEPREFIX SOURCES hello_world_main.cpp
INSTALLABLE)

TRIBITS_ADD_TEST(hello_world NOEXEPREFIX PASS_REGULAR_EXPRESSION "Hello World")

TRIBITS_ADD_EXECUTABLE_AND_TEST(unit_tests SOURCES hello_world_unit_tests.cpp
PASS_REGULAR_EXPRESSION "All unit tests passed")

TRIBITS_PACKAGE_POSTPROCESS()
```

- Library linking automatically handled
- Avoid duplication and boiler-plate code
- Fewer commands
- Install by default (most common)
- Automatic namespacing of test & exec names

TriBITS Structural Units and Meta-Projects

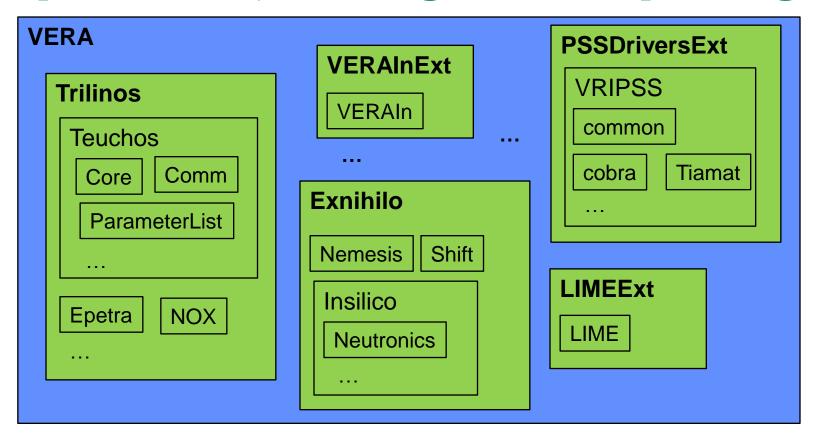

TriBITS Structural Units

- TriBITS Project:
 - Complete CMake "Project"
 - Overall projects settings
- TriBITS Repository:
 - Collection of Packages and TPLs
 - Unit of distribution and integration
- TriBITS Package:
 - Collection of related software & Tests
 - Lists dependencies on SE Packages & TPLs
 - Unit of testing, namespacing, documentation, and reuse
- TriBITS Subpackage:
 - Partitioning of package software & tests
- TriBITS TPLs (Third Party Libraries):
 - Specification of external dependency (libs)
 - Required or optional dependency
 - Single definition across all packages

Packages
+
Subpackages
=
Software
Engineering
(SE)

Packages

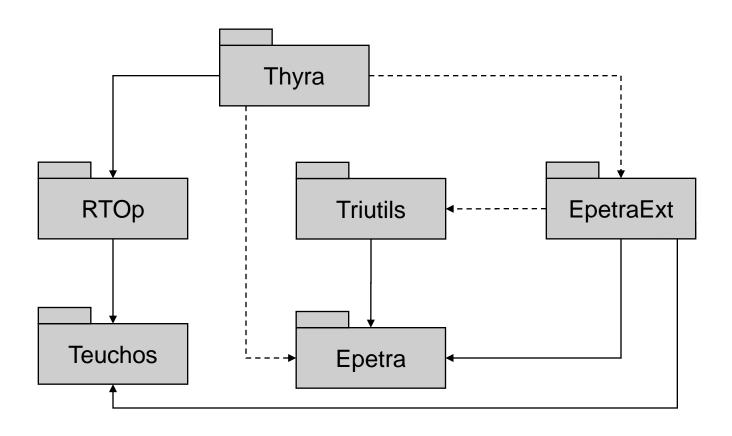

Example: VERA Meta-Project, Repositories, Packages & Subpackages

- VERA: Git repository and TriBITS meta-project (contains no packages)
- **Git repos and TriBITS repos**: Trilinos, VERAInExt, LIMEExt, Exnihilo, ...
- TriBITS packages: Teuchos, Epetra, VERAIn, Insilico, LIME, VRIPSS, ...
- TriBITS subpackages: TeuchosCore, InsilicoNeutronics, VRIPSSTiamat, ...
- TriBITS SE (Software Eng.) packages: Teuchos, TeuchosCore, VERAIn, Insilico, InsilicNeutronics, ...

Automated Package Dependency Handling

Package Dependency Structure (Example: Trilinos)

Required Dependence ----Optional Dependence

Package Dependencies.cmake Files

Teuchos

TRIBITS_PACKAGE_DEFINE_DEPENDENCIES(
LIB_REQUIRED_TPLS BLAS LAPACK
LIB_OPTIONAL_TPLS Boost)

Epetra

TRIBITS_PACKAGE_DEFINE_DEPENDENCIES(
LIB_REQUIRED_TPLS_BLAS_LAPACK_)

RTOp

TRIBITS_PACKAGE_DEFINE_DEPENDENCIES(
LIB_REQUIRED_PACKAGES Teuchos)

Triutils

TRIBITS_PACKAGE_DEFINE_DEPENDENCIES(
LIB_REQUIRED_PACKAGES Epetra)

EpetraExt

TRIBITS_PACKAGE_DEFINE_DEPENDENCIES(

LIB_REQUIRED_PACKAGES Epetra Teuchos

LIB_OPTIONAL_PACKAGES Triutils)

Thyra

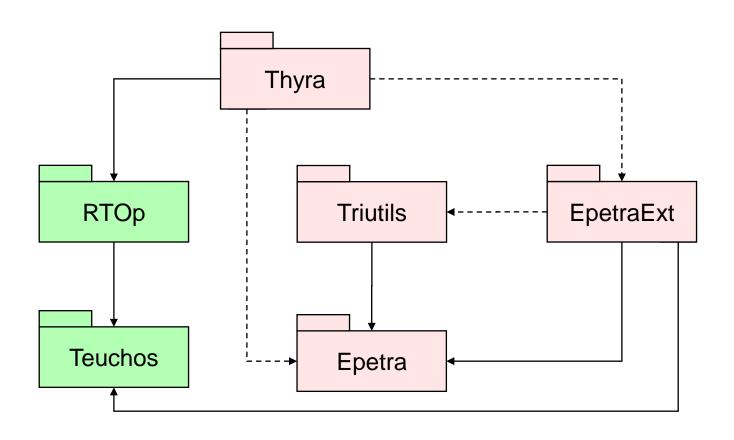

TRIBITS_PACKAGE_DEFINE_DEPENDENCIES(

LIB_REQUIRED_PACKAGES RTOp Teuchos

LIB_OPTIONAL_PACKAGES EpetraExt Epera)

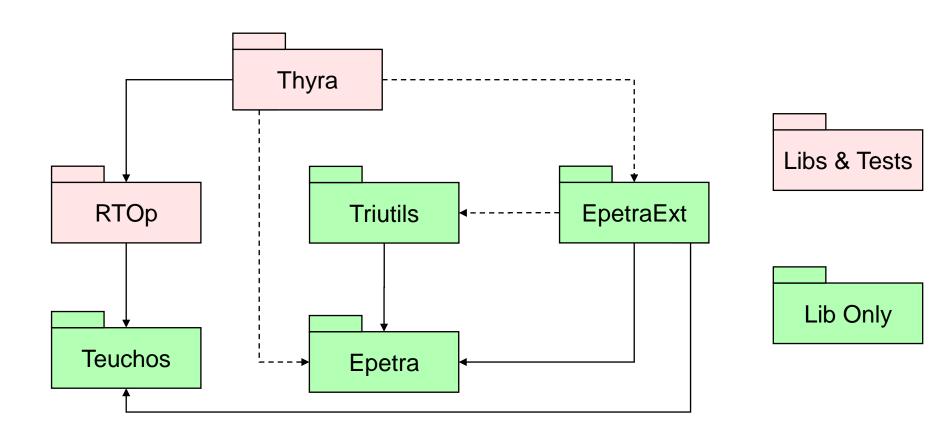

Pre-Push Testing: Change Epetra

- \$./do-configure \
 - -D Trilinos_ENABLE_Epetra:BOOL=ON \
 - -D Trilinos_ENABLE_ALL_FORWARD_DEP_PACKAGES:BOOL=ON \
 - -D Trilinos_ENABLE_TESTS:BOOL=ON

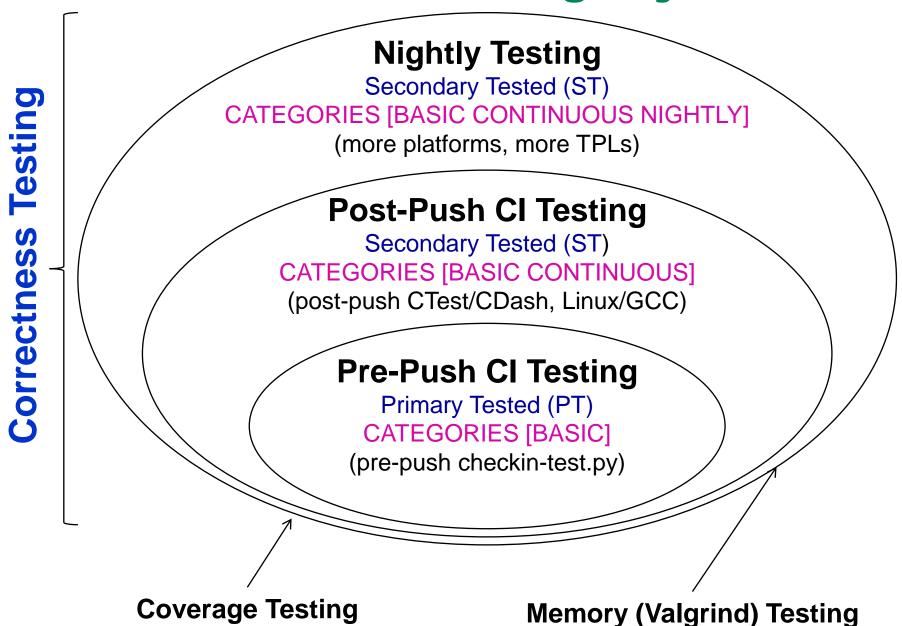

Pre-Push Testing: Change RTOp

- \$./do-configure \
 - -D Trilinos_ENABLE_RTOp:BOOL=ON \
 - -D Trilinos_ENABLE_ALL_FORWARD_DEP_PACKAGES:BOOL=ON \
 - -D Trilinos_ENABLE_TESTS:BOOL=ON

Extended Testing Support

TriBITS Standard Testing Layers

Pre-Push CI Testing: checkin-test.py

checkin-test.py --do-all --push

- Integrates with latest version in remote git repositories
- Figures out modified packages

Modified file: 'packages/teuchos/CMakeLists.txt'

- => Enabling 'Teuchos'!
- Enables all forward/downstream packages & tests
- Configures, builds, and runs tests
- Does the push (if all builds/tests pass)
- Sends notification emails
- Fully customizable (enabled packages, build cases, etc.)
- Documentation: checkin-test.py --help

Post-Push Testing: TRIBITS_CTEST_DRIVER()

CDash Dashboard for 4/6/2014

- Rolled-up summaries for each build case
- Nightly, CI, Experimental build cases

My CDash All Dashboards Log Out **VERA** Dashboard Calendar No update data as of Sunday, April 06 2014 - 23:00 EDT Show Filters Advanced View Auto-refresh Help Configure Build Test **Build Name Build Time** Not Run Fail Pass Frror Warn Frror Warn ∆ Linux-GCC-4.6.1-Apr 07, 2014 - 21:45 100+ VRIPSS pu241.ornl.gov MPI DEBUG GCC461 CI FDT △ Linux-GCC-4.6.1-Apr 07, 2014 - 21:38 pu241.ornl.gov 220+2 COBRA TF MPI DEBUG GCC461 CI

CDash CI Iterations

- Individual packages built in sequence
- Targeted emails for failed package build & tests
- Failed packages disabled in downstream packages

=> Don't propagate failures!

TriBITS Miscellaneous Facts

- TriBITS System Dependencies:
 - TriBITS Core: Basic configure, build, test & install
 => Only raw CMake (2.8.4+)
 - TriBITS Extra SE tools (checkin-test.py, ...)
 => Git (1.7.0.4+) and Python 2.4
- Usage of TriBITS:
 - Trilinos (SNL, originating project)
 - ORNL: SCALE, Exnihilo, DataTransferKit
 - Non-ORNL: MPACT (Univ. of Misc.), COBRA-TF (Penn. State)
 - CASL-Related: VERA
- TriBITS Development & Distribution:
 - 3-clause BSD-like license, Copyright SNL
 - Current: Trilinos (trilinos.sandia.gov), CASL (casl-dev)
 - Near future: Github (public repo, global pull)

- Contact: bartlettra@ornl.gov
- Sponsors:
 - CASL: Consortium for the Advanced Simulation of Lightwater reactors
